SKILLS

I'm a developer fascinated with the growing web technologies. I've used *HTML*, *CSS* and *JavaScript* for **over 8 years**. React is the framework that I've worked with the most, but I have experience with **Vue**, **Angular**, and **jQuery**.

I have experience creating documentation and architectures and successfully leading small (1-3 members) teams. I enjoy working on improving testing, documentation, and refactoring, always providing the best service possible. I aim to create responsive and accessible solutions that offer a **top-notch user experience**, no matter how or where the product is accessed.

EXPERIENCE

Virtual Mind, Argentina (remote) — *Senior React Developer*

September 2022 - May 2023

- Start the migration of our code from JavaScript to TypeScript.
- Work on the designer tool used by our clients to compose AI views and flows.
- Use React to create new nodes and links representing new states and prompts in the data flow.
- Help with the DTMF responses and configuration.
- Work implementing Microfrontend architecture

'Nuffsaid, Palo Alto(remote) — *Senior Frontend Engineer*

October 2021 - March 2022

- Work closely implementing our flagship product, focusing on our Messaging editor and interactions.
- Create strategies and plans to develop new features while maintaining existing work.
- Guide and help junior engineers by assigning and monitoring tasks while providing a safe space to grow and experiment.
- Coordinate with the product and engineering team on projects for the following quarters.

Virtual Mind, Argentina (remote) — *Senior React Developer*

November 2020 - January 2022

- Work multi-project with the integration team to satisfy our client's needs in a CRM-hub app.
- Create strategies to migrate our test and lay the foundation for future testing strategies.
- Continue the migration of our code from Flow to TypeScript.
- Implement new features across different teams and repos.
- Interview candidates for Senior and Mid Engineering positions.

Avantica Technologies, Costa Rica (remote) — *Senior React Developer*

August 2019 - August 2020

- Maintain legacy Backbone.js code while implementing new features using React.
- Do architecture for testing our four different apps (frontend)
- Migrate legacy Ruby, jQuery and Backbone code to React.
- Expand our proprietary React components library.

GBH, Dominican Republic— *Senior Developer*

January 2018 - September 2019

- Led a small team of devs to develop our client vision
- Work refactoring a whole React and Python application. Add tests to the app mentioned above.
- Do the whole architecture for the new App using React, redux and jest tests.
- Create a component library to share between our two apps.
- Work on a couple of features in the React Native iOS app.

GBH, Dominican Republic— *Senior Frontend Developer*

April 2018 - January 2019

- Create tailored websites for our clients using WordPress
- Use jQuery and VUE.js to create features and pages for our client's websites.
- Develop a customisable template for a real estate broker's company, making it easier for the representatives to have personal websites connected to the real estate API but keeping in touch with the overall brand.

Viral Reach, Dominican Republic— *Frontend Developer*

April 2017 - January 2018

- Create tailored websites for our clients using WordPress
- Use jQuery and VUE.js to create features and pages for our client's websites.
- Develop a customisable template for a real estate broker's company, making it easier for the representatives to have personal websites connected to the real estate API but keeping in touch with the overall brand.

Rosmir Group, Dominican Republic— *Frontend Developer (Freelancer)*

March 2016 - Oct 2018

- Create tools to integrate clients' internal services with their websites using Node.js.
- Create tailored websites for our clients using WordPress.
- Work on Regresan.do a survey platform for restaurants and pharmacies.
- Work on RegresanDO's dashboard to present the collected data to our clients so they can improve their services.

University O&M, Dominican Republic— *Web Developer*

Jan 2016 - Jun 2017

- Create a new portal for our university.
- Create websites using only HTML, SASS and JavaScript.
- Create the university's official blog using WordPress.
- Provide support and develop features for the university's administration app.

EDUCATION

University O&M, Dominican Republic — *Computer Science BE.*

January 2012 - 2017

Carnegie Mellon University, Pennsylvania (online) — *Software Architecture Principles and Practices*

November 2018 - January 2019
